

RA890 Primary Controls

The RA890 control is the workhorse of the electronic combustion controls. From the old R180-190 devices to the latest model, this unit will replace all models using the same 10-screw subbase. When servicing these device, remember: the RA890F has a green reset button and uses a rectification signal, while the RA890G has a purple reset button and works with a U.V. minipeeper. For individual questions regarding the device you are replacing, contact our sales and engineering department for information. Our archives contain many of the old, original specs.
