# Take a Major Step Forward In Flame Supervision.

The **Fireye Flame Monitor System** is a microprocessor-based burner management control system with self-diagnostics, non-volatile memory and a vocabulary of 42 different messages. The monitor's message center provides the operator with scroll-out information.

The **Flame Monitor** uses the *same wiring base as the Fireye D Series* and is directly interchangeable with most models, without rewiring.

The **Flame Monitor System** can be connected to your automation equipment for remote monitoring.

- Get around-the-clock monitoring
- Track burner activity over regular phone lines
- Link with your automation computer

COMPUTER MONITORING HOOKUP

The System can be connected via voice grade quality telephone line for Remote Monitoring or by use of the ED570-8 cable with RS232 connectors for local monitoring.

ORDERING INFORMATION	
ORDER #	**DESCRIPTION**
E100	Chassis, Display, Cover
E300	Expansion Module
E500-1	Communication Interface – single monitor
E500-3	Communication Interface – up to 4 monitors
E720W-CD	Communication Software CD
EUV-1	U.V. AMPL
E1R1	I.R. AMPL
EUVS4	U.V. Self-check
ERT1	Rectifying
