

**Oil Coalescing Filters**

Use to remove aerosols, solid contaminants and oil vapors from compressed air systems using lubricated compressors. Coalescing filters offer a much higher degree of oil removal efficiency than standard air filters. The automatic drain works on pressure of 20-175 PSIG and has 1/8" NPT drain port. This filter removes 99.97% of all aerosols—unmatched by any other method.

ORDER #	Size	SCFM	Element
<b>Metal Bowl</b>			
OCF114M	1/4	15	OCFE114
OCF112M	1/2	60	OCFE112
<b>Polycarbonate Bowl w/Guard</b>			
OCF114P	1/4	15	OCFE114
OCF138P	3/8	35	OCFE138
OCF112P	1/2	60	OCFE112
FILT-DRAIN	Replacement drain assy		

**Standard or "Pre Filter" Air Filters**

With new mini-style thermostats and smaller orifices used in pneumatic control, it is essential that you deliver very clean air. Contaminants can cause more trouble with new equipment than ever before. The Pneuline 5-Micron Reusable Pre Filter traps dirt and aerosols in its 11 ounce bowl. For Automatic Drain, add "AD" to end of model number (example: SAF114M-AD)

**"EL Cheapo" Filters!**

For continuing contamination problems, this filter is a very inexpensive solution. The refill is very readily available in any janitor's closet—a roll of toilet paper! Handy for emergency use when there is a failure in your air station filtration system. Element included.

ORDERING INFORMATION	
ORDER #	Description
M-30	Compressed Air Filter
No.2	Replacement Roll

Size: 1/4" NPT

**Intake Filter Replacement Kits**

Where clean air begins—every compressor intake air filter should be inspected regularly and replaced promptly when needed. The Pneuline replacement kit is about the same cost as the factory element only. Once the replacement kit is in place, replacement cost is minimal.
